

# SOMAROUTHU SATYANARAYANA

DevOps Lead | Senior DevOps Engineer | Platform Engineer | Kubernetes | AWS | Terraform | CI/CD

satya.ssn54@gmail.com | 8096318401

## PROFESSIONAL SUMMARY

---

DevOps Lead with 9 years of experience across DevOps engineering, infrastructure administration, and platform operations spanning Linux/UNIX and Windows environments. Skilled in Kubernetes, Docker, Terraform and Infrastructure as Code, AWS cloud services, CI/CD (Jenkins, GitLab CE), configuration management, monitoring and automation. Experienced in leading platform operations, production environment stability, application deployment automation, release activities and cross-functional delivery.

## CORE TECHNICAL SKILLS

---

**Cloud & Containers:** AWS (EC2, EKS, S3, IAM, VPC, RDS ), Kubernetes, Docker, Helm, Rancher

**Infrastructure as Code:** Terraform, Chef, Ansible

**CI/CD:** Jenkins, GitLab CE, Continuous Integration, Continuous Delivery, Release Management

**Automation & Scripting:** Chef, Rundeck, Ansible, Bash, Shell Scripting, Python (working knowledge)

**Version Control:** Git, GitHub, GitLab CE, SVN

**Operating Systems:** Linux/UNIX, Ubuntu, CentOS, Windows

**Web & Application:** Apache, Nginx, Apache Tomcat

**Monitoring & Logging:** Prometheus, Grafana, Nagios, ELK, Alertmanager

**Data & Messaging:** MySQL, Redis, Apache Solr, Zookeeper, ActiveMQ, RabbitMQ

**Identity & Access:** Active Directory, LDAP, AWS IAM

**Package Management:** RPM, YUM, DEB

## CERTIFICATIONS

---

- Certified Kubernetes Administrator (CKA) — 2024
- AWS Certified Cloud Practitioner (AWS CCP) — 2022

## PROFESSIONAL EXPERIENCE

---

**MedPlus Health Services Pvt Ltd** | DevOps Lead

*Aug 2017 – Present | 9 Years*

- Lead DevOps and infrastructure operations supporting Development, Testing, Staging, Training and Production environments.
- Lead Kubernetes platform operations, including cluster maintenance and containerized application deployment, scaling and management across multiple environments.
- Provision and manage AWS infrastructure (EC2, EKS, S3, IAM, VPC) using Terraform, standardizing infrastructure-as-code practices across environments.
- Develop and maintain automation for application deployments across Apache Tomcat, React applications and web-server configurations.
- Build and configure production-ready environments in data-center infrastructure and support physical and virtual servers.
- Administer Jenkins and GitLab CE pipelines to support CI/CD and release activities in coordination with Development, QA and Release Management teams.
- Use Chef cookbooks and recipes, node attributes and environment properties to automate and standardize configuration management.
- Create Rundeck jobs integrated with Chef to automate recurring infrastructure and application operations.
- Write Python and Bash scripts to automate operational tasks, health checks and routine infrastructure workflows.
- Monitor systems and applications using Prometheus, Grafana and Nagios and troubleshoot CPU, memory and other performance issues.
- Manage version-control branching, tagging and release activities using Git, GitHub and SVN.
- Maintain Apache and Nginx web servers and application deployments on Apache Tomcat.
- Maintain MySQL services including master and replication configurations and administer Redis clustered environments.
- Install and maintain Apache Solr with Zookeeper and support ActiveMQ/RabbitMQ application integrations.

- Administer Active Directory/LDAP and AWS IAM, integrating LDAP authorization with Rancher and Rundeck.
- Manage production users, access controls and activity logging across physical and virtual infrastructure.

## SELECTED PROJECTS

---

### Kubernetes Platform Implementation

Implemented Kubernetes technology across the organization to support containerized application deployment, orchestration, scaling and cluster operations, integrating with existing operational tooling.

### AWS Infrastructure Automation with Terraform

Adopted Terraform to provision and manage AWS resources (EC2, EKS, S3, IAM, VPC), replacing manual configuration with version-controlled infrastructure as code.

### Centralized Application Logging

Planned centralized logging for applications using the ELK stack to improve application-log consolidation, operational visibility and troubleshooting.

### Apache Tomcat Upgrade Rollout

Planned and rolled out Apache Tomcat version upgrades across application environments with controlled implementation and operational validation.

### Java JDK Upgrade & High-Availability Rollout

Planned Java JDK version upgrades across systems in controlled chunks, maintaining service availability through multiple DNS servers and phased rollout practices.

### Server / VM Access Restriction

Implemented restricted user access across servers, including virtual-machine environments, following least-privilege operational requirements and controlled administrative access.

## CORE STRENGTHS

---

- DevOps Leadership
- Platform Engineering
- Kubernetes & Containers
- Infrastructure as Code (Terraform)
- Automation
- Production Reliability
- Release Engineering

## EDUCATION

---

| Qualification      | Institution                        | Year | Score |
|--------------------|------------------------------------|------|-------|
| B.Tech (CSE)       | R.V.R & J.C College of Engineering | 2017 | 8.42  |
| Intermediate (MPC) | Sri Chaitanya College              | 2013 | 9.24  |
| SSC                | SKDVS High School                  | 2011 | 86.3% |
